Risk Levels	Little to No	ne N	linor	Moderate	Majo	Major	

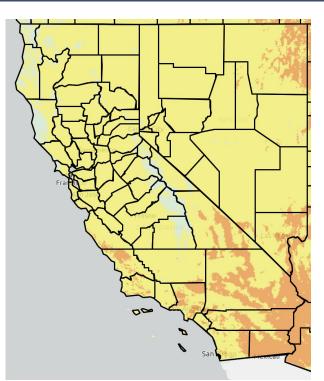

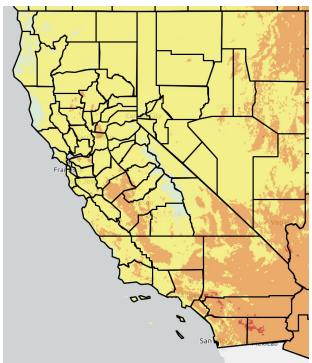

- Seasonably comfortable temperatures will remain in place across much of the state through late week, with mainly minor heat risk concerns across the deserts. Notably hotter temperatures will again build over much of the state into the weekend and first half of next week, especially for areas just inland.
 - Moderate to even locally high heat risk impacts are forecast to redevelop across much of inland California by the weekend and into early next week
- Much like the past few weeks, breezy conditions will be noted most afternoons and evenings across the state through at least early next week, particularly in and near the mountains, foothills, and southern deserts. These winds and ongoing dry conditions will bring locally elevated fire weather conditions.
 - At this time, widespread critical fire weather conditions remain unlikely over the next
 7 days
- Dry weather is also expected through at least early next week

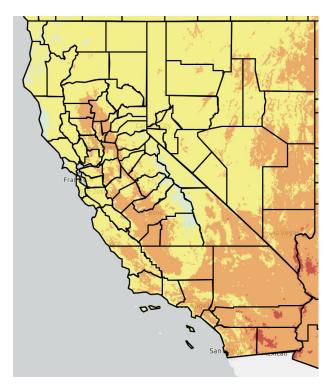

No widespread significant precipitation is forecast across the state through Saturday

Note: Forecast precipitation amounts are an average for any particular location. Thunderstorms may produce locally higher rainfall amounts.

Thursday Friday Saturday

Green	Level 0	No Elevated Risk
Yellow	Level 1	Low Risk for those extremely sensitive to heat, especially those without effective cooling and/or adequate hydration
Orange	Level 2	Moderate Risk for those who are sensitive to heat, especially those without effective cooling and/or adequate hydration

Red	Level 3	High Risk for much of the population, especially those who are heat sensitive and those without effective cooling and/or adequate hydration
Magenta	Level 4	Very High Risk for the entire population due to long duration heat, with little to no relief overnight

Weather Outlook (6-14 Days)

6-10 Day Outlook (July 12 - July 16)

Temperatures

• Above normal temperatures are strongly favored statewide

Precipitation

Near normal precipitation is also favored statewide

8-14 Day Outlook (July 14 – July 20)

Temperatures

Above normal temperatures are again strongly favored across all of California

Precipitation

Near normal precipitation is again also favored statewide

Risk Assessment Matrix

Impact Level Definition

- 1. Impactful weather is not expected.
- 2. Potential threat to lives and property if no/incorrect actions are taken.
 - a. Localized impacts on commerce possible.
 - b. Includes events that occur frequently.
- 3. Potential threat to lives and property if no/incorrect actions are taken.
 - a. Impacts on commerce possible.
 - Includes events that occur a few times per year.
- 4. Actions likely needed to save lives and/or property.
 - a. Significant impacts to commerce possible.
 - b. Includes events that occur infrequently.
- Actions required to save lives and/or property.
 - Significant and extended impacts to commerce.
 - b. Includes exceptionally rare events.
